Can't wait to eat a pawpaw?

***We now have Frozen Pawpaw Purée available year-around!
All the skin, seeds and fibers have been removed to ensure
uniform quality. Made from the fresh fruit in our orchards!***

1 pint (16oz) = \$10 + S&H

1 quart (32oz) = \$18 + S&H

Orders will be filled as they are received.

Due to the increase in demand for Pawpaws, we apologize for the limited numbers of grafted Pawpaws available.

We are currently in the process of growing and grafting trees for future seasons.

While all efforts are made to keep this list accurate, we apologize for human and mother nature's errors.

<u>Name</u>	<u>Description</u>	<u>Fruit Size</u>	<u>Ripening Time (In Michigan)</u>	<u>Currently In Stock At Nash Nurseries</u>
Seedling	Seedling trees are grown from seed harvested from the orchards at Nash Nurseries. All seed used is harvested from named grafted cultivars. There is no guarantee of what the fruit size, flavor, or ripening time will be. Seedlings are a good choice for an inexpensive pollinator and rootstock. You may also hit the pawpaw jackpot and end up with a truly amazing, delicious pawpaw that is just waiting to become the next sensation!	?	Fall	Yes
Davis	Selected from a wild grove in Michigan by Corwin Davis. Mottled green skin and yellow flesh. Keeps well in cold storage. A favorite here at the nursery.	Large-Very Large	1st week of October	Yes
Looking Glass Gold	Named after the river running behind Nash Nurseries. One of Bill's original pawpaws planted and is one of our absolute favorites! Large fruit that is very sweet and spiced. An early-mid ripening tree that is always picked clean and enjoyed at the market or right off the tree. Top selling fruit here at the nursery.	Large	Mid-Late September	Yes
Mango	Selected from wild in Tifton, GA in 1970. Known for its vigorous growth and hardiness. Plump, juicy fruit resembling its namesake.	Large	1st week of October	Yes
NC-1	This hybrid seedling of Davis x Overleese is one of Nash Nurseries favorites. Selected in Ontario, Canada in 1976. Fruit has few seeds and ripens earlier than most. One of our most consistent market-ready fruit.	Large	Mid-September	2022
Overleese	Selected from wild in Rushville, IN in 1950. Sets large, juicy fruit with great flavor. Very orange-yellow flesh and consistent market favorite.	Large	1st week of October	2022
Pennsylvania Golden	Fruit has yellow skin when ripening and golden flesh. One of earliest ripening pawpaws that we carry. Very hardy, flavorful and sweet.	Medium	Mid-September	Yes
Prolific	Selected by Corwin Davis in Bellevue, MI. Fast grower and fruit has light golden flesh.	Medium	1st week of October	Yes
Sunflower	Claimed as a self-fertile cultivar. Deep yellow skin with butter-color flesh. Few seeds and large fruit size make this cultivar stand out.	Large	1st week of October	Yes
Super Mario	Named after our great friend and lead grafter Mario. This tree is one of his favorite trees selected from his orchard. It is a very large fruit with a very sweet flavor and spiced aroma. It has proven to be unique with the fruit gradually ripening throughout the harvest season. A truly super pawpaw!	Large to Very Large	Mid-September through Mid October	Yes
Peterson Tallahatchie®	Latest Peterson release. Excellent flavor, low seed count, smooth texture. Multiple fruit - often more than 5 - in cluster.	Medium to Large	2nd week of October	2022
Peterson Rappahannock®	Selected by Neal Peterson. Fruit tends to show a yellowish color break at picking stage. This tree is particularly noteworthy due to its unusual leaf habit. Leaves tend to be held horizontal-to-upright making fruit more visible. Very bright crisp, sweet yellow pulp.	Medium	Last week of September	Yes
Peterson Shenandoah®	Selected by Neal Peterson as a seedling of Overleese. Fruit has creamy yellow flesh with few seeds. Excellent sweet, smooth creamy flavor. A hit at every fresh market.	Large-Very Large	1st week of October	Yes
Peterson Potomac®	Selected by Neal Peterson. Fruit is extremely fleshy and typically the least seeds of all cultivars. Firm texture with sweet & rich flavor.	Large	1st week of October	Yes
Peterson Allegheny®	Size of fruit can be increased by thinning when fruit set is high. Firm and smooth flesh, yellow in color. Very sweet flavor with a touch of citrus.	Medium	Late September	Yes
Peterson Wabash®	Selected by Neal Peterson. Fruit flesh is moderately firm, creamy, and sweet. Flesh color is yellow to orange. One of - if not the biggest fruit we grow at the nursery.	Very Large	2nd week of October	Yes
Peterson Susquehanna®	Selected by Neal Peterson. Fruit tends to have few seeds and be very fleshy. Thick skin makes this variety less fragile than others, making it perfect to ship to a friend. Excellent sweet, aromatic flavor.	Large-Very Large	2nd week of October	Yes
KSU - Chappell™	KSU Chappell is an impressive new cultivar developed by Kentucky State University. Outstanding flavor, texture, and beautiful, large fruits. Fruits average around 8-12 ounces with some larger, around 1 pound. Trees are very vigorous, strong and extremely fast growing. It might be the fastest growing pawpaw cultivar available.	Large	1st week of October	2022
KSU - Atwood™	Released by Kentucky State University Horticulture Program. High yielding. Fruit has yellow-orange flesh. Very good mango-banana-pineapple flavor.	Medium	1st week of October	Yes
KSU - Benson™	Another variety newly introduced by Kentucky State University, KSU-Benson Pawpaw™ is prized for it's heavy crop, 150 or more fruit per tree, and rich and delicious flavor. This pawpaw variety is a high yielding, round, early season ripening variety. It has a unique mango, banana, pineapple like flavor.	Medium	Late September	2022
IXL	Cross between Overleese and NC-1. It's large, sweet fruit is sought after by man pawpaw enthusiasts.	Large	October	Yes
Wells	Selected in Salem, Indiana in 1990 by David Wells, this delicious fruit boasts a banana/mango flavor with a hint of pineapple.	Medium	Mid October	Yes

Grafted Pawpaws vs Seedling Pawpaws

Grafted Pawpaws

For short-term results it is advisable to plant clonally grafted fruit trees. For fruit growing 'beginners', grafted plants are certainly a good investment. With grafted trees you are sure of getting a known quality fruit and regular crops within the minimum amount of time. As a general rule, grafted trees bear in half the time of a seedling, however this is variable. When choosing a grafted specimen you have the benefit of the performance, quality and uniformity of the scion (top growth) cultivar from an excellent named parent plant.

Our Pawpaws are grafted on seedling root stock grown from our orchards here at Nash Nurseries in Mid-Michigan (zone 5b). It is advisable to plant 2+ different grafted named cultivars to ensure proper pollination. (i.e. 1-'Potomac®' Hybrid Peterson Pawpaw & 1-'Shenandoah™' Peterson Pawpaw®)

Seedlings

Seedling trees are adaptable. It is this adaptability and hardiness that makes seedlings a good choice when planting out in less than ideal conditions or naturalizing areas. Seedlings are a less expensive option when looking to establish large quantities or areas of trees.

No two seedlings are the same and it is this diversity, a natural occurrence, where lies the opportunity to improve selection, whether it is for quality of flowers or foliage, disease resistance, growth characteristics or quality of fruit. It is a complete unknown of what type of fruit and production a seedling will exhibit. Seedlings do make excellent pollinators when planted amongst grafted cultivars. (i.e. 1+ 'Shenandoah™' Peterson Pawpaw® & 1+ Seedling Pawpaw).

Seedlings can also always be grafted at a later date with a scion wood from a known cultivar. Essentially you can grow a seedling, see if you do indeed like the fruit or not, then "top work" (graft) the tree into a known cultivar. . Seedlings work great for pollination and moderate fruit production. If you are just getting started in growing Pawpaws, seedlings provide an inexpensive option.

All of the seed harvested and sold/grown at Nash Nurseries comes from our orchards of named/grafted cultivars. None of the seed or seedlings are from wild-harvested sources. Our orchards are all open air pollinated, so there are no guarantees on the parentage of any of the seed/seedlings.

If you have any questions, please contact us! We will be happy to help you figure out what type of tree will work the best for your situation!
